Stake advance is not necessary and that PJM should u reasonably accurate across a wide cross section	ecame apparent that significant effort would be required to run eholders think the level effort required to run test for customers in use the economic CBL as a default. The economic CBL has been not of customers which is why it is the default economic CBL. This by DRS to improve the accuracy of emergency energy settlements

Use economic CBL as default for non-summer capacity compliance measurement. If alternative CBL is proposed then RRMSE test is required to evaluate options – this is same process used for economic CBL evaluation outlined in the tariff.
