

# Combined Cycle Model Update

Operating Committee  
September 4, 2014

- Prototype in production
  - Current completion estimate \$7M (on hold for cost benefit)
- Performance issue with Market Clearing Engine (MCE)
  - Day ahead must post within 5 hours
  - Intra-Day Reliability Unit Commitment every 4 hours
- Limitations
  - Maximum of three configurations (2 X 1 with duct burners)
  - No clearing for regulation during transitions
  - No configuration changes with real time commitment
- Other issues
  - Minimum run time reset on downward transitions
