

MSRS – PDF Security Settings

Markets Applications
Tech Change Forum

- Members with many subaccounts would like to combine PDF invoices into a single file using Adobe software.
 - PDF document security settings too strict to allow this
 - As a workaround, members needed to use third party software, print to PDF printer drivers, or manually scanning pages.
- New security settings preserve the read-only nature of the invoice but allow annotating (sticky notes), copy/paste, and creating portfolios.
