Subject: MISO-PJM JCM May 27 Feedback Request

Jeanna and David,

Please see Ameren's comment on this issue below:

Ameren supports capacity deliverability and believes that it is important to the development of properly functioning and efficient capacity markets. Increased capacity deliverability in both directions will help develop market efficiencies and reliability between RTOs. In their review of transmission requirements, MISO must ensure that requirements for Planning Resources are equitable, regardless of whether the resource is located externally or internal to the RTO.

Let me know if you have any questions. Thanks

.....
