

eLRS Refresh

DRS
September 29, 2015

- PJM is refreshing all eSuite applications
 - Began 2 years ago, continues for the next 2 years
 - Focus on a new technology standard
 - Consistent look and feel
- eLRS is in queue for refresh (application will be replaced)
 - Opportunity to make some improvements to functionality and process

- New application will be called “DR Hub”
- Target for production rollout is Fall 2016, Sandbox available Summer 2016
- Retains much of the look and feel of the current application but with enhancements
- Web Services interaction will remain the same with limited minor improvements where necessary
- Will efficiently process transactions to reduce screen refresh times and file upload wait time

- Locations under .1 MW no longer must be aggregated; aggregation is still available
- Registration Review Tasks
 - All data needed to make decision on screen
 - Approve/Deny at field level so re-submission of registration only requires review of previously denied field(s)
- Search screens:
 - Multi-selection dropdowns
 - Improved list of fields displayed on screen
 - Data downloads will include all records in search, not just records on the displayed page

– Suggestions and Questions:
