

Market Consistency – NSPL and PLC Daily Zonal Scaling Factors

Ray Fernandez
Manager, Market Settlements Development
Market Settlements Subcommittee
July 21, 2015

- **Peak Load Contributions (PLC)**
 - PJM requires that the sum of the daily PLC values submitted by the EDCs for each zone equate to the zonal target.
 - This sum can vary on a day-to-day basis due to retail customer attrition.
 - Daily Peak Load Contributions (PLC) data is currently scaled by eRPM to achieve a balance with the set zonal target.

- Network Service Peak Load (NSPL)
 - A similar requirement exists for NSPL values submitted daily by the EDCs.
 - eRPM does not apply a daily zonal scaling factor.
 - EDCs are responsible for ensuring that daily totals match the zonal target.
- The inconsistency in handling these data values leads to confusion and potential misuse of data.
- Informational update made at July 8 MIC meeting.

- **Work Activities**
 - Provide any additional education
 - Develop potential solution(s)
 - Review governing documents for necessary changes
 - Obtain stakeholder approval
- **Schedule**
 - Considering Capacity Performance activities, the duration of work is expected to take approximately 6 months

- Implement NSPL data scaling in the same manner that PLC values are scaled in eRPM.
- Requires code changes to eRPM
 - Implement scaling to meet zonal target on a daily basis
- Review manuals and tariff for potential changes
