

Resource Adequacy Analysis Subcommittee
Teleconference / In-Person Meeting
January 26, 2016
1:00 p.m. – 4:00 p.m. EST

ADMINISTRATION

Mr. Falin opened the meeting and reviewed the agenda. Mr. Quevada performed roll call. The meeting minutes from the December 9, 2015 meeting were approved and will be posted as final.

DISCUSSION OF RRS ASSUMPTIONS

Mr. Patricio Rocha-Garrido discussed the impact of modeling DR in RRS. There is currently no DR modeled in the RRS. Results of an investigation show that adding DR in the RRS decreases the IRM, however, it leaves the FPR unchanged. A member requested that PJM look into quantifying the likelihood of various committed resource types showing up during a given delivery year.

Next, Mr. Rocha-Garrido gave an overview of the current Load Model Selection Process. Results of an investigation of the current procedure and its assumptions were discussed. Three alternatives were presented and discussion of this issue will be continued at future RAAS meetings.

World Modeling (Capacity Benefit of Ties, CBOT) was the last item on the agenda. The current practice was presented as well as a procedure to investigate the assumptions. GEMARS was used to model PJM and each of the 5 neighboring regions separately. CBOTS were calculated by using single-year load shapes over the 2002-2013 period. Results were discussed and will be continued in future meetings.

The target is to finalize the 2016 study assumptions in the next two RAAS meetings and to send a recommendation to the PC in the April/May time frame
