

PC Special Session: Critical Infrastructure Stakeholder Oversight Monthly Progress Report

MC Webinar
May 26, 2020

1. Critical Infrastructure Stakeholder Oversight

Issue Status

The Critical Infrastructure Stakeholder Oversight special session group has completed education and interest identification, and is in the process of presenting solution options in the matrix in two separate work streams that address 1. *Avoidance* of new CIP-014 facilities, and 2. *Mitigation* of CIP-014 facilities.

Target Completion

The current work plan is targeting July 2020 to present solution packages to the Planning Committee, but we are planning for and scheduling additional meeting time through September.

Progress Update

The first meeting of this group was held on Monday, January 27. Stakeholders were given education on the NERC CIP 014-02 standard, and CEII protections. Stakeholders also had the opportunity to provide interests.

The second meeting was held on Wednesday, February 12. Additional education on the NERC standards review and approval process was provided, as well as an update on neighboring RTOs compliance with this NERC standard. Stakeholders continued to identify interests, and started to identify design components in the matrix.

The third meeting was held on Tuesday, March 3. Education on PJM's transmission planning resilience analysis was presented, and stakeholders presented new design components and solution options.

The fourth and fifth meetings were on April 3, and April 28, and PJM and Stakeholders presented solution options to address the critical infrastructure issue in two separate components: *Mitigation* and *Avoidance*.

Action Requested (if necessary)

No action requested at this time.
