Moved the refund payment for</li> </ul>	

underperformance during a synchronized reserve event from section 6.3 to this section.

**Reason for change:**

These changes support a proposal developed by the MIC. The proposal addresses more clearly defining the amount of Tier 1 Synchronized Reserve resources that should be compensated when the Non-Synchronized Reserve Market Price is greater than \$0 and the tying of a Performance Obligation to that compensation.

**Summary of the changes:**

## Tier 1 Compensation Proposal:

- Outside of a spin event, Tier 1 resources that do not opt-out will accept a Performance Obligation when the NSRMCP is greater than \$0 and will be paid for the amount of their Tier 1 estimate from RT SCED at the SRMCP.
- Tier 1 estimates for resources that are self-scheduled and economically dispatched at their economic minimum will equal zero.
- During a spin event, resources with no Tier 1 estimate or resources that opt-out of accepting a Performance Obligation will be paid the synch reserve premium price (status quo) if they do respond. Resources that accept a Tier 1 Performance Obligation will be paid for the amount of their Tier 1 estimate from RT SCED at the SRMCP.
- Tier 1 Synchronized Reserve resources that respond to a spin event will be made whole to their cost to respond to the event unless self-scheduled for energy and dispatched at economic minimum.
- Apply the current Tier 2 compensation refund structure to any resource that accepts a Performance Obligation and does not provide the full amount of their Tier 1 estimate during a spin event.
- A Tier 1 resource will be allowed to update its Spin Max value at any point during the operating hour to allow a more accurate reflection of a resource's reserve capability and a more reliable Tier 1 MW estimate.
