

Manual 11 Revisions: Update to Proposed Language Inclusion on Regulation Historic Performance Score

Michael Olaleye
Sr. Engineer, Real-Time Market Operations
Markets Implementation Committee
September 11, 2019

| Action Required | Deadline | Who May Be Affected |
|---|-----------|-------------------------------|
| Communicate to Staff about updates to Manual 11 | 9/26/2019 | Market Buyers, Market Sellers |

- Purpose of Manual update is to document the procedure for addressing missing historical performance scores for the regulation market clearing
 - Existing Manual language does not address what score to use if system failure or other issue prevents the latest performance score from being transferred to the Market Clearing Engine
- Proposed language was endorsed at August MIC
- Comments were received at the August MRC with regard to the value used when timely data is not available

- Modified language will be subject to MRC endorsement at the September meeting

The historic performance score is calculated upstream of the market clearing process as discussed in PJM Manual 12: Balancing Operations, Section 4.5.5 Disqualification and Requalification of a Resource. If the daily historic performance scores for an operating day are not available due to a system failure or other issue that affects the calculation of the historic performance scores for all resources, the latest available historic performance scores from the last three days will be used. If no historic performance scores are available from the last three days, then a default value of 1 is used- then the latest available regulation qualification or regulation requalification test score for each resource by signal type is used.

| | MIC | MRC |
|-------------|------------|------------|
| First Read | 7.10.2019 | 8.22.2019 |
| Endorsement | 8.7.2019 | 9.26.2019* |

*The revised language as detailed on Slide 4 will be presented for endorsement at the September MRC
