Average Load Forecast Error

Daily Peak Forecast Error (April)

18:00 Day Ahead Forecast Error

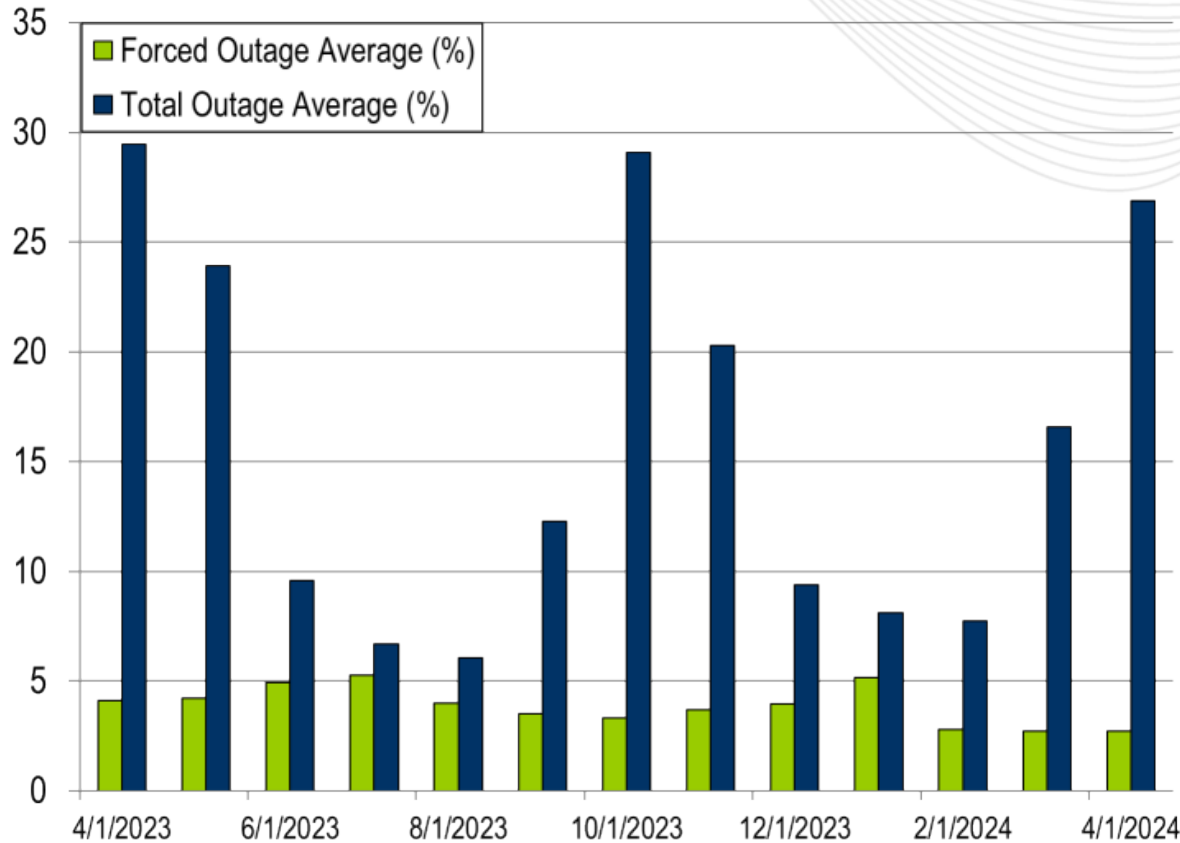

PJM's BAAL performance has exceeded the goal of 99% for each month in 2023 and 2024.

- 2 Spin events
- 2 Shared Reserve events
- The following Emergency Procedures occurred:
 - 1 High System Voltage Action
 - 1 Geomagnetic Disturbance Warning
 - 1 Post Contingency Local Load Relief Warnings (PCLLRWs)

- 1 Shortage Case Approved
- The approved Shortage Cases occurred on:
 - 04/14/2024:
 - 1 Shortage Case for the 20:25 interval
 - Factors: load increase and interchange

The 13-month average forced outage rate is 3.89% or 7,682 MW.
 The 13-month average total outage rate is 15.83% or 31,472 MW.

2022-2023 Planned Emergency, Unplanned, and Total Outages by Ticket

Note: "Unplanned Outages" include tripped facilities. One tripping event may involve multiple facilities.

PCLLRW Count Vs. Peak Load – Daily Values For 3 Months

Event	1			2		
Date	04/04/24			04/13/24

Appendix

Goal Measurement: Balancing Authority ACE Limit (BAAL)

- The purpose of the new BAAL standard is to maintain interconnection frequency within a predefined frequency profile under all conditions (normal and abnormal), to prevent frequency-related instability, unplanned tripping of load or generation, or uncontrolled separation or cascading outages that adversely impact the reliability of the interconnection. NERC requires each balancing authority demonstrate real-time monitoring of ACE and interconnection frequency against associated limits and shall balance its resources and demands in real time so that its Reporting ACE does not exceed the BAAL ($BAAL_{LOW}$ or $BAAL_{HIGH}$) for a continuous time period greater than 30 minutes for each event.
- PJM directly measures the total number of BAAL excursions in minutes compared to the total number of minutes within a month. PJM has set a target value for this performance goal at 99% on a daily and monthly basis. In addition, current NERC rules limit the recovery period to no more than 30 minutes for a single event.

The 13-month average forced outage rate is 3.89% or 7,682 MW.
 The 13-month average total outage rate is 15.83% or 31,472 MW.
