

# Special PC – RTEP Process Enhancements

Planning Committee

Aaron Berner

April 11, 2019

- 60 day deferral of vote at MRC means April MRC for end of deferral
- Multiple meetings of Special PC covering education & potential Manual language
- Multiple versions of language proposed
- Some alignment of language has occurred, more time likely beneficial
- PJM recommendation – seek additional 60 day deferral and continue efforts
  - May be good to step back and revisit the objectives of the group before further drafting

- Ensure planning principles are adhered to in decisions to be made
  - Process dependencies must be considered
- Recognize and maintain distinction between RTEP and M-3 planning processes
- Resultant Manual text simultaneously meets all obligations of FERC Orders (e.g. 888, 890, 845, 1000)

# Objectives – Document Potential Interactions And Expected Outcomes Between Supplemental Projects And RTEP Process

- Supplemental Projects fall into five categories
- Interactions documented as “threads” or use cases between RTEP/Supplemental Processes
- Examples/illustrative considerations:
  - Supplemental Project identified before RTEP
    - Is Supplemental Project the right solution? Will Supplemental Project be built regardless of RTEP?
  - RTEP identified before Supplemental Project
    - Should Supplemental Project be proposed as solution in competitive window?

- Good discussion has been developing
- Stopping discussions now may not adequately address all concerns
- Potentially prevent expansion of solution space for each circumstance
- Build understanding and document clarifications before drafting text
- Revise manuals, and possibly Operating Agreement, to finalize for PC / MRC consideration
- Additional 60 Days of Discussion Requested in an additional LS Power Delay Motion
- Meeting dates to be posted on PJM calendar and notice to PC list
