

Upgrade ID Format Update

Tarik Bensala – Engineer

Transmission Planning

Planning Committee

June 4th, 2024

- PJM has been making enhancements to how we manage Upgrade ID Requests. Recently, PJM has built the TO Planner application which allows for submitting Supplemental Upgrades. Similarly, PJM has deployed a similar tool for submitting Non-Competitive Baseline upgrades.
- Our internal database has been updated and is now live along with the new applications that are listed above

- As part of these enhancements, PJM streamlined the Parent – Child or Parent – Component relationships by adding “.0” to components that did not have a suffix. For example b3783 became b3783.0
- Moving forward, PJM will reverse this action on all previously submitted projects due to legal reasons
- There are a few projects that were submitted to FERC with the “.0” suffix, and those will continue to have that moving forward.
