The Generator Availability Data System ([eGADS](#)) supports the submission and processing of generator outage and performance data as required by PJM and North American Electric Reliability Corporation (NERC) reporting standards.

Key Product Features

- Accepts submission of unit statistical performance and reliability data to determine the value of the facility as an unforced capacity resource for all generating facilities taking part in PJM markets
- Reports included: Cause Code, Event Data, GORP, Outage Statistics, Generation and Fuel Performance, and Statistics.
- Verification Test Data Screens

- Retired units are not showing up in the dropdown list for user selection for the rest of the retired year.
- Level 2 Validation Status for Retired or not-yet-commissioned units should not be shown as Not Validated.
- When generating submission NERC 05 Performance file, the system should automatically generate monthly data for retired unit for the rest of the retired year.
- The Company ID dropdown list is not sorted when adding a new Utility
- In the validation of Verification Test data, a unit's installed capacity should be selected from the most recent value before the Test Date and not the beginning of the Season.
- In the validation of Verification Test data, Test Index 1 can only be used when the test is within the respective test period.
- In the validation of Verification Test data, The Power Factor validation should be: $(\text{Power_Factor} - (\text{Gross} / \text{Reactive_Gen_MVAR}))$ must be less than 0.1.
- Add a new screen and database table to store additional Verification Test requirement data and additional notes. The new screen is called "PJM Unit Extension" and it can be found in the Administration Menu.
- Change the Verification Test program to use the requirements specified in the new table above.
