

Primary Frequency Response & WMPA Resources

DER Subcommittee
November 15, 2018

- “PJM believes resources under WMPAs should have the same PFR capability requirements as resources under ISAs, with deference to the distribution utility regarding their operational implementation where appropriate. However, current jurisdictional boundaries prevent PJM from imposing these requirements on WMPA units. PJM commits to continuing stakeholder discussions at the DERS to pursue other possible solutions to address this issue. PJM does not want to pre-suppose a solution strategy or a potential outcome to these stakeholder discussions.”
