

Changes to Manual 39 Nuclear Plant Interface Coordination

Augustine Caven
Sr. Lead Engineer, Generation
May 17, 2017

- **Section 3.1 – Nuclear Plant Generation Owner Actions**
 - Clarified language to ensure all changes made to Nuclear Plant Interface Requirements (NPIR) are clearly highlighted with drivers communicated
- **Attachment C: Plant Specific NPIRs Revision History**
 - NPIR revision update

- Attachment A, Section 5 – Roles and Responsibilities
 - Added clarification to reinforce that, following notification of a grid-side event that impacts the NPIRs, the nuclear plant shall communicate any resultant limiting conditions experienced at the plant including:
 - Operability of off-site power source
 - Limiting Condition for Operations (LCO) requiring unit/plant reduction/shutdown
 - Plant Technical Specification or other limitation
 - Through the established communication channels
 - This is intended to ensure PJM and LCC awareness of impacts to the plant as they operate the system to meet the NPIRs.

Committee Reviews / Endorsements:

- SOS: April 26, 2017, June 1, 2017
- OC: May 3, 2017, June 6, 2017 (Endorsement)
- RSCS: Thursday, May 18th, 2017
- MRC: May 25, 2017, June 22, 2017 (Endorsement)
