

ACR Triennial Review Generator Survey

PJM Interconnection
Laura Walter

- Avoidable Cost Rate (ACR) is a generator's maximum allowable offer into RPM
- Per the Tariff, PJM shall:
 - Review default ACR values to determine values are reasonable
 - Report to PJM stakeholders by September 2012
 - File changes, if any, with FERC by December 2012

Your part in this review:

We are asking members with Generating Units to fill out a web based survey between May 1 and May 31, 2012.

- Link to the survey will be sent through committee web lists
- Generator data reported through the web form will remain confidential and be secure
- Data will be used to evaluate current default values

- ***This survey will be used in determining the default ACR values for RPM auctions after the 2015/2016 auction.***
- ***Your information will be used to make sure these values are accurate and reflect current fixed costs.***

- You may need to involve plant operators, accounting departments, rates departments, or even HR departments to gather the data for the Review

Your input makes a difference, please involve your company.

***Questions about the Survey
should be directed to:***
