

# MEPETF Phase 3

## Impact of Including Negative Benefits in B/C Ratio Calculation

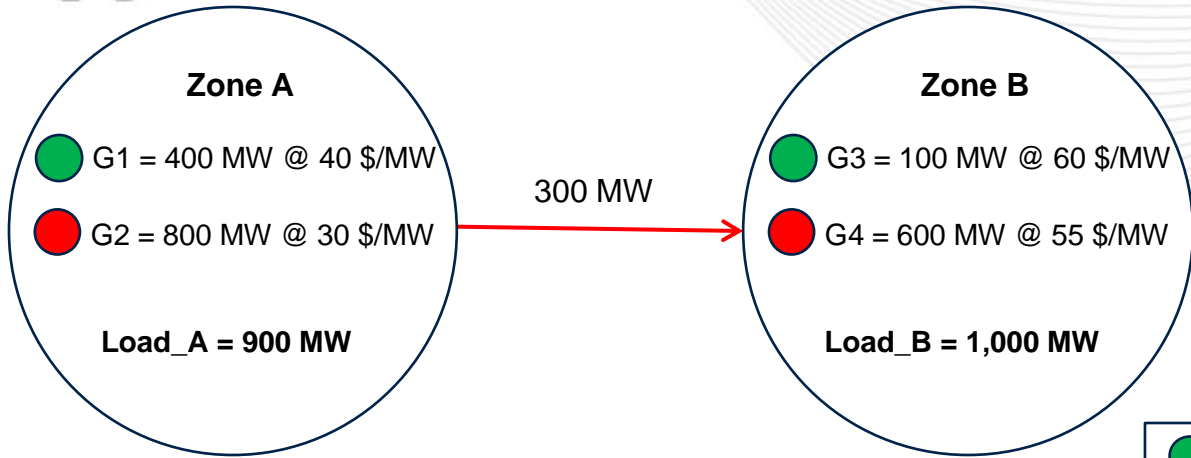

Nick Dumitriu  
PJM Market Simulation

Market Efficiency Process Enhancement Task Force  
July 30, 2019

## **PJM stakeholders approved rules for the Benefit/Cost Metric to only include zones with a decrease in net load/capacity payments**

- Market Efficiency projects by definition address market congestion inefficiencies that exist because customers on both sides of a constraint are not paying equitable costs
- Zones that are currently benefiting from the inefficiency should not be included in B/C Metric because the following:
  - These zones would not derive benefits absent the inefficiency in first place
  - These zones are benefitting from the inefficiency before the market efficiency project is placed into service via artificially low prices
  - These zones are not paying for the direct cost to build the upgrade to remove the inefficiency
  - Threshold to pass a Market Efficiency project if include all zones more difficult because not addressing the cost inefficiency

# Impact on B/C Ratio – Illustrative Example

LMP\_A = 40 \$/MWh  
LP\_A = \$36,000

LMP\_B = 60 \$/MWh  
LP\_B = \$60,000

- Marginal generator
- Maxed out generator
- Offline generator

LMP\_A = 50 \$/MWh  
LP\_A = \$45,000

LMP\_B = 50 \$/MWh  
LP\_B = \$50,000

Generator	Zone	Min/Max Cap (MW)	Gen Block Bid Offer (\$/MWh)
G1	A	300/600	\$38@300MW;\$40@400MW;\$45@550MW
G2	A	400/800	\$25@400MW;\$27@550MW;\$30@700MW
G3	B	50/150	\$55@50MW;\$60@100MW;\$65@125MW
G4	B	400/600	\$45@400MW;\$50@500MW;\$55@550MW

230 kV Line Upgrade Information	
Line Rating Before Upgrade	300 MW
Line Rating After Upgrade	700 MW
Cost (\$)	\$5,000

Results	
LP_A Savings	-\$9,000
LP_B Savings	\$10,000
Total Congestion Savings	\$6,000
Status Quo Lower Voltage B/C Ratio (Benefiting Zones Only)	2.0
B/C Ratio (Including negative benefits)	0.2

# Previously Approved Projects – Statistical Analysis

Project Group	Project Count	Project Cost Average (\$M)	Status Quo (only +)		Including Negative Benefit Zones (+ and -)		Average decrease of NLP Savings (%)
			Average of NLP Savings (\$M)	Average of B/C Ratios	Average of NLP Savings (\$M)	Average of B/C Ratios	
Total projects analyzed	13	\$ 34.49	\$ 237.62	39.13	\$ 89.40	26.66	65%
Projects with cost < \$20 million	10	\$ 4.35	\$ 155.23	49.90	\$ 65.51	34.20	70%
Projects with cost > \$20 million	3	\$ 134.96	\$ 512.27	3.22	\$ 169.03	1.52	46%
Projects still passing the B/C Ratio test when including PJM Zones with negative benefits	9	\$ 9.39	\$ 175.46	51.85	\$ 104.78	39.25	22%

*Notes: Data sample included the Market Efficiency enhancements that were previously approved based on load payments benefits. An outlier data point, a small \$0.1 million upgrade was removed from the sample as it skewed the results.*
