

PFR During Performance Assessment Intervals

December 1, 2017 PFRSTF

Should Performance Assessment Interval performance be adjusted to account for PFR response?

Some considerations:

- Relatively small quantity of PFR MW provided
 - further diminished by integration over 5 minute interval
- Length of PFR event
 - Large majority of events last less than 1 minute
- Precision of PFR response measurement
 - RT telemetry used to measure response, rather than settlement quality meter data

Hold harmless vs. full add back into PAI performance calculation
