- ISA/CSA Execution
  - Circulate “draft” pro-forma ISA with FSA?
  - Will circulating draft documents actually improve anything?
  - Define review cycles?
  - ?

- **Interconnection Hubs**
  - Wind resources are locationally dependent
    - You can't move their fuel source like you can with other types of generation
  
  - Multiple resources interconnecting to a single line creates multiple breaks in the line
    - Reduces reliability
    - Complicates outage coordination
    - Increases overall costs
  
  - Follow up discussions at the Planning Committee

- **Study Scope and Upgrade Estimates**
  - We will include a full set of NERC Category C contingencies at the feasibility study stage
  
  - Feasibility Study Cost Estimates
    - Develop look-up tables for typical upgrades in each transmission zone
  
  - “Normalize” Study Scope
    - Impact Study
    - Facility Study
  
  - Facility Study
    - Utilize 3<sup>rd</sup> Party
      - Will add additional overhead and cost to members

- **Generation Clusters**

- Breakaway proposal was intended to address some of the issues related to tightly clustered projects
- Breakaway proposal would create issues with the existing process
- Are there other reforms that should be considered to address issues related to tightly clustered projects?
