

The staffs of the OPSI Commissions continue to struggle with why there needs to be two categories of transmission projects with public policy requirements. Could PJM explain to us briefly in writing why transmission projects with costs recovered pursuant to FERC accepted cost allocation proposal needs to be included in the tariff along with supplemental projects. Two other items. OPSI staff prefers the language in 1.5.9 third line read, expansion or enhancement to the transmission system, rather than the "transmission expansion or enhancement " language in the draft. Finally is it PJM's position that the entity chosen to construct public policy projects, which is a transmission or expansion, the costs of which will be recovered pursuant to a FERC-accepted cost allocation" have the same obligation to construct as an entity chosen to construct a reliability project.
